

Phishing is the practice of luring unsuspecting internet users to a fake website by using an authentic-looking email with the real organization's logo, in an attempt to steal passwords, financial or personal information, or introduce a virus attack. Please note that there are two easy and clear identifiers that guarantee you have reached AmeriCU Credit Union's Online Banking Login Page. The website in your address bar should be <https://www.myamericu.org/legacyob/signon/>. Also, when visiting a secure site, you'll see a picture of a lock visible in the address bar or in the lower right hand corner of the screen. Both of these must be visible in your browser to ensure your safety when logging into Online Banking. If you double-click on the pad lock image, you can view our Verisign Certificate details. These details verify AmeriCU's website and ensure that you have reached the authentic login page. If the certificate is not issued by Verisign and is not for the website <https://www.myamericu.org>, then the site is not valid. Please be sure to check the spelling.
